

DESCRIPTION

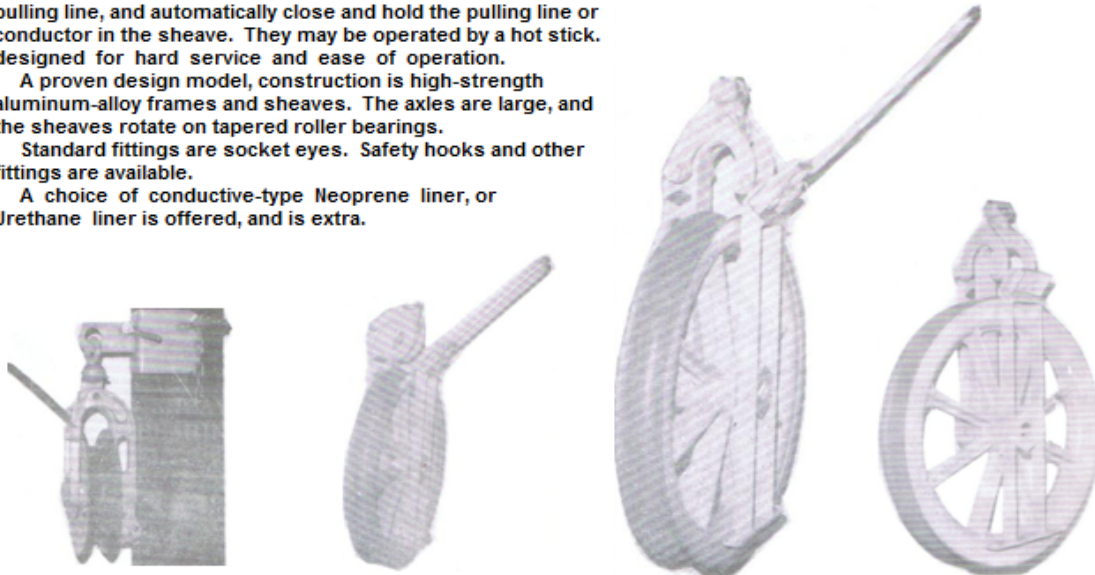

These blocks are designed for stringing single conductors by helicopter or regular methods. The outrigger are easily attached or removed. A means is provided for attaching ropes to prevent block twisting.

The conductor guards are pivoted and permit entrance of the pulling line, and automatically close and hold the pulling line or conductor in the sheave. They may be operated by a hot stick designed for hard service and ease of operation.

A proven design model, construction is high-strength aluminum-alloy frames and sheaves. The axles are large, and the sheaves rotate on tapered roller bearings.

Standard fittings are socket eyes. Safety hooks and other fittings are available.

A choice of conductive-type Neoprene liner, or Urethane liner is offered, and is extra.

BRACKET NO. 12
BLOCK MAY BE ATTACHED TO POLE OR TOWER FOR STATIC WIRE WITH THIS BRACKET.

ABOVE VIEW SHOWS CONDUCTOR GUARDS RETRACTED FOR REMOVING CABLE. THEY CLOSE AUTOMATICALLY.

ABOVE VIEW SHOWS BLOCK WITH OUTRIGGER ARM ATTACHED. READY FOR STRINGING WIRE.

ABOVE VIEW SHOWS BLOCK WITH OUTRIGGER ARM REMOVED FOR REGULAR STRINGING.
